Title: Computer Assisted Drafting and Design

Job Titles:
- Mechanical Drafters (17-3013)
- Electrical Drafters (17-3012)
- Electronic Drafters (17-3012)
- Civil Drafters
- Drafters, All Others

Course Description:
This course trains students for entry-level positions in the drafting field. This course combines classroom instruction with unpaid and/or paid on-the-job training experience.

Students learn drafting fundamentals, geometric construction, introduction to computer assisted design and drafting (CAD), CAD hardware and software, commands and functions design application, symbol libraries and text commands, and layered drawings.

This course aligns with and incorporates the California Career Technical Education Model Curriculum Standards, Common Core Content Standards as reflected in the Academic Alignment Matrix, Standards for Career Ready Practice, Anchor Standards, and Pathway Standards.

**Course Description**

This course trains students for entry-level positions in the drafting field. This course combines classroom instruction with unpaid and/or paid on-the-job training experience.

Students learn drafting fundamentals, geometric construction, introduction to computer assisted design and drafting (CAD), CAD hardware and software, commands and functions design application, symbol libraries and text commands, and layered drawings.

This course aligns with and incorporates the California Career Technical Education Model Curriculum Standards, Common Core Content Standards as reflected in the Academic Alignment Matrix, Standards for Career Ready Practice, Anchor Standards, and Pathway Standards.
Classroom Physical Environment
The classroom portion of this course should be conducted in a classroom or a site conducive to create/maintain an appropriate learning environment. The classroom setting requires both a fully equipped lab and classroom with equipment, tools, and supplies in sufficient quantity to train the number of students assigned to each instructor and must be conducive to creating/maintaining an appropriate learning environment. Also so required is sufficient space for individual and group instruction including:

- Adequate lighting
- Sink with running hot and cold water
- Student desks and chairs
- Teacher’s desk and chair
- Filing cabinet for storage
- Floor and counter space for skill demonstrations
- Access to overhead projector and screen
- Access to DVD and monitor
- Access to LCD or similar projections system
- Teacher’s desk/chair
- Incorporate appropriate equipment to include but not be limited to:
  - Computers with minimum memory capability to utilize industry-based standard software (1:1 student-to-computer ratio)
  - Utilize industry standard-based software including an integrated software package containing word processing, database management, spreadsheet and graphics
- Appropriate job-specific materials
- Appropriate job-specific simulation opportunities

NOTE: This class should be conducted in a site that simulates an industry-standard workplace in this field.

Equipment and Supplies
- Hardware/Software
- Internet Access
- Virtual Training Modules
- Drafting Tables (optional)
- Drafting Boards
- Plotters and printers
- Compass, triangles, and “T” squares
Operational Methodologies

- **Classroom (C):** Instruction provided by a qualified teacher, utilizing a lesson plan, to a group of students in a classroom.
- **Community Classroom (CC):** An instructional method which utilizes unpaid, on-the-job training experiences at business, industry, and public agency sites.
- **Cooperative Vocational Education (CVE):** An instructional method which correlates concurrent, formal vocational classroom instruction with regularly scheduled, paid on-the-job training experience.
- **Related Instruction (RI):** Classroom instruction and unpaid/paid on-the-job training experiences are being conducted together within the same time frame (quarter, semester, etc.).
- **On-the-Job Training (OJT):** Refers to “hands-on” job skill training in either the community classroom (unpaid) or in correlation with cooperative vocational education (paid).

Training OJT Environment
Title 5 Education Code No. 10085

The following criteria shall be used to select and approve a community classroom training station:

(a) The management of the community classroom training station shall:
   1. Have a clear understanding of the community classroom methodology and a willingness to participate in the training experience.
   2. Cooperate with the career technical education director, or his/her designee, in preparing a written joint venture agreement.
   3. Participate with the community classroom teacher in preparing an individualized training plan.
   4. Provide and assist students with unpaid on-the-job training experiences as described in the individualized training plan.
   5. Consult with the community classroom teacher regarding the student’s progress during the unpaid on-the-job training experiences.
   6. Assist in maintaining accurate records of the pupils training hours.

(b) The training station shall offer training opportunities in the specific occupation for which the course is approved. Training opportunities at the station shall expand competencies developed in the classroom instruction portion of the student’s training.

(c) The training station shall have adequate equipment, materials, and other resources to provide an appropriate learning opportunity.

(d) Training station conditions shall prevail which will not endanger the health, safety, welfare, or morals of the pupil.

(e) The training station shall be concurrently engaged in a business operation, which requires employment in the occupation for which training is provided.

Ed. Code Title 5 10107
(a) The employer at the cooperative career technical training station shall:

(1) Have a clear understanding of program objectives and a willingness to participate in the program.
(2) Provide adequate supervision to ensure a planned program of the students’ paid on-the-job training in order that the student may receive maximum education benefit.
(3) Consult with the cooperative career technical education teacher regarding the paid on-the-job progress of the student.
(4) Cooperate with the career technical education direction or his or her designee in preparing a written training agreement.
(5) Participate with the cooperative career technical education teacher and the student in preparing an individualized training plan.
(6) Provide a minimum of 8 hours of paid employment per week to assist students to acquire those competencies necessary for employment and advancement in the occupational area for which training offered.
(7) Assist in maintaining accurate records of the students’ training hours.
(8) Provide Workers’ Compensation Insurance for students employed through the Cooperative Career Technical Education Program.

(b) The training station shall offer training opportunities in the specific occupation for which the course is approved. Training opportunities at the paid station shall be in the occupation for which related instruction is provided.

(c) Training station working conditions shall not endanger the health, safety, welfare or morals of the students.

(d) The training station shall have adequate equipment, materials and other resources to provide an appropriate learning opportunity.

**Instructional Methodologies, Strategies and Techniques**

A variety of instructional methodologies, strategies, and techniques are used to instruct the students. These include, but are not limited to the following:

- Teacher modeling
- Lecture and guided practice
- Demonstration
- Project-based learning
- Assigned readings from tutorials, textbooks, journals, etc.
- Class discussions
- Hands-on activities
- Multimedia presentations
- Individual instruction
- Cooperative learning
- Field trips
- Work-based learning experiences
• Guest speakers
• Web-based research
• DVDs
• Student presentations (oral, written, technological)
• Utilization of computers/technology

Assessment of Student Performance
Assessment of student performance may include but is not limited to:
• Student portfolios
• Student demonstrations
• Individual and group presentations
• Supervisor/teacher observations
• Peer evaluations
• Self-reflections
• Critiques
• Rubrics
• Oral assessment
• Reports and research papers
• Projects
• Tests and quizzes
• Performance tasks

Students will be assessed in multiple ways to ensure that a variety of learning styles are addressed.

Safety
• All students will successfully complete a safety exam with results kept on file.
• Specialized safety needs related to tools and supplies used.

Recommended Supplemental Instructional Textbooks
• Technical Drawing 101 with AutoCAD, Autodesk
• Fundamentals of Modern Drafting, Cengage Brain
• Drafting and Design, Fairchild Books and Visuals
Special Instructor(s) Prerequisites

- Valid California Designated Subjects credential authorizing CTE teaching in the industry sector identified.
- Knowledge of current industry trends and practices, including appropriate technology.
- Willingness to establish local community work sites and ability to access resources.
- Willingness to participate in advisory and committee meetings, including recruiting and collaborating with business partners.

</tbody>
</table>
| A. Orientation/Introduction to CTE | • Relate philosophy, purpose and goals of CTE.  
• Explain the importance of meeting the demands of the 21st century workplace.  
• Explain the “Drivers of Change” and how it relates to college and career. | | | |
| B. Occupational Safety | • Discuss health and safety policies, procedures, regulations, practices and exhibit the proper use of equipment and handling of hazardous materials.  *AS 6.0*  
• Explain the reasoning of basic safety rules in the classroom and workplace. Demonstrate an understanding of safety rules and practices by passing an assessment, with 90% accuracy. | | | |
| C. Technical Skills and Academic Knowledge | • Apply appropriate technical skills and academic knowledge.  *CRP 1*  
• Analyze and apply appropriate academic standards required for successful industry sector pathway completion leading to postsecondary education and employment. Refer to the industry sector alignment matrix for identification of standards.  *AS 1.0* | | | |
| D. Communication Skills | • Communicate clearly, effectively, and with reason.  *CRP 2*  
• Explain how a positive attitude can help in becoming an effective communicator.  
• Practice good communication to help build positive relationships in the classroom and at the workplace.  
• Compare and contrast written and oral communications.  
• Describe the importance of email etiquette as it relates to effective communication.  
• Assess how nonverbal communication affects messages.  
• Explain the impact of personal and professional social media in communication. | | | |

| I. CAREER READY PRACTICE (Continued)                     | • Describe issues related to communicating in a global society.  
• Explain the appropriate etiquette for answering telephone calls and leaving voicemail messages; receiving and making requests; giving directions and persuading others.  
• Identify the steps to plan a successful oral presentation.  
• Develop an education and career plan aligned with personal goals.  
  *CRP 3*  
• Integrate multiple sources of information presented in diverse formats and media (e.g., visually, quantitatively, orally) in order to make informed decisions and solve problems, evaluating the credibility and accuracy of each source and noting any discrepancies among the data.  
  *AS 3.0*  
• Apply the decision-making process to develop a college and career plan.  
  *AS 5.0*  
• Identify employability skills required for participation in the world of work.  
• Assess interests, skills and aptitudes and match these to career options.  
• Identify further education and/or training needed for career choices.  
• Develop a resume, cover letter and other resources for the job search process.  
• Complete a job application.  
• Identify what employers are looking for when hiring employees.  
• Apply effective interviewing skills and write a thank-you note.  
• Create a career portfolio that links to future college and career options. | RI | OJT| RI | OJT |

| **F. Technology**                                        | - Apply technology to enhance productivity.  *CRP 4*  
- Use technology, including the Internet, to produce, publish, and update individual or shared writing products in response to ongoing feedback, including new arguments and information.  
  *AS 4.0; AS 10.0*  
- Explain the role technology plays in the workplace.  
- Describe the laws and licenses that govern the use of technology at school and in the workplace.  
- Compare different types of media (word processing, digital media software, and video, audio) in relation to effectively communicating messages. |     |    |     |
| **G. Critical Thinking and Problems Solving Skills**     | - Utilize critical thinking to make sense of problems and persevere in solving them.  *CRP 5*  
- Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem, narrow or broaden the inquiry when appropriate, and synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.  
  *AS 5.0*  
- Identify everyday strategies to build the capacity for critical thinking and school and the workplace.  
- Explain the problem-solving process, including identifying the root cause of a problem, generating and considering possible solutions, choosing the best solution, and evaluating outcomes. |     |    |     |
| **H. Personal Health and Financial Literacy**            | - Practice personal health and understand financial literacy.  *CRP 6*  
- Identify factors related to a person’s well-being.  
- Analyze the relationship between personal health and workplace performance. |     |    |     |
### INSTRUCTIONAL CONTENT

#### I. CAREER READY PRACTICE (Continued)

- Explain the relationship between stress and aggressive behavior.
- Identify ways to lower the level of stress.
- Use critical thinking and communication skills to manage conflict.
- Develop potential living expenses and a budget based on income and needs.
- Understand the responsible use of financial institutions and services (e.g. checking, savings, ATM, credit cards, investments, retirement, etc.).
- Recognize that financial literacy and responsibility leads to a secure future and career success.

#### I. Responsible Citizenship

- Act as a responsible citizen in the workplace and the community. *CRP 7*
- Explain what the school, workplace and community expects of a student as a member of society.
- Identify personality and behavior characteristics that have a positive or negative impact at school, in the workplace, and in the community.
- Analyze the impact of an individual’s decision on others and on the environment, and recognize both short and long term consequences of actions.
- Identify areas in which sensitivity is required in a diverse workplace.

#### J. Integrity, Ethical Leadership, and Effective Management

- Model integrity, ethical leadership, and effective management. *CRP 8*
- Respond thoughtfully to diverse perspectives; synthesize comments, claims, and evidence made on all sides of an issue; resolve contradictions when possible; and determine what additional information or research is required to deepen the investigation or complete the work. *AS 8.0*
- Define integrity and how it relates to the classroom and workplace.
- Identify characteristics of ethical behavior and leadership.

## II. Design/Drafting Core

### A. Orientation
1. History
2. Career paths

- Research past, present, and projected technological as they impact a particular pathway. *AS 4.5*
- Interpret and explain terminology and practices specific to the Engineering and Architecture sector. *AS 10.1*
- Know significant historical and current events that have relevance to engineering design. *PS C1.1*
- Interpret the development of graphic language in relation to engineering design. *PS C1.2*
- Explain the historical and contemporary concepts of design and drafting and how they apply in a contemporary setting.
- Research the scope of career opportunities available and the requirements for education, training, certification, and licensure. *AS 3.4*
- Describe the types of careers in design and drafting and their educational requirements. *FS 3.2, 10.7*

### B. Fundamentals
1. Scales
2. Equipment
3. Symbols and abbreviations
4. Lettering
5. Layout
6. Sketching
7. Dimensions and tolerances

- Employ engineering design equipment using the appropriate methods and techniques. *PS C2.1*
- Use scales and standard drafting equipment.
- Apply conventional engineering design equipment procedures accurately, appropriately, and safely. *PS C2.2*
- Apply the concepts of engineering design to the tools, equipment, projects, and procedures of the Engineering Design Pathway. *PS C3.1*
- Apply sketching techniques to a variety of architectural models.
- Use common symbols and abbreviations.
- Describe the processes of lettering and/or text editing. *PS C10.1*
- Measure accurately and apply appropriate lettering techniques.

- Use proper projection techniques to develop orthographic drawings. *PS C5.0*
- Understand the various techniques for viewing objects. *PS C5.3*
  - Use the six principle views to fully describe an object.
- Understand the applications and functions of sectional views. *PS C6.0*
  - Incorporate section views and appropriate cutting planes to clarify hidden features or object on drawings.
- Understand the applications and functions of auxiliary views. *PS C7.0*
  - Develop primary auxiliary views of an object.
  - Crosshatch auxiliary sections using proper crosshatch form.

- Produce proportional two- and three-dimensional sketches and designs. *PS C3.2*
- Present conceptual ideas, analysis, and design concepts using freehand, graphics, and communication techniques. *PS C3.3*
- Understand and apply proper dimensioning standards to drawings. *PS C8.0*
- Use tolerancing in an engineering drawing *PS C9.3*

- Identify and correctly use the alphabet of lines.
- Represent objects graphically using appropriate projection techniques.
- Draw full sections and half sections using appropriate sectional line conventions and symbols.
- Develop multiview drawings using the orthographic projection process. *PS C5.2*
- Understand the applications and functions of auxiliary views. *PS C7.0*

**designs. PS A3.2**
- Dimension drawings using current standards of architectural dimensioning.
- Present conceptual ideas, analysis, and design concepts using freehand graphic communication techniques. *PS A3.3*

**Orthographic Projection**
- Interpret and explain terminology and practices specific to the Engineering and Architecture sector. *AS 10.1*
  - Identify and correctly use the alphabet of lines and architectural line symbols.
  - Represent objects graphically using appropriate projection techniques.
  - Define the three principal views orthographic projection.
- Construct projects and products specific to the Engineering and Architecture sector requirements and expectations. *AS 10.3*
  - Demonstrate the process of projection to create orthographic drawings.

**Basic House Design**
- Describe the various components of structures, including lighting; heating, ventilating, and air-conditioning (HVAC); mechanical; electrical; plumbing, communication; security; and vertical transportation systems. *PS A8.1*
  - Identify the four basic house designs discuss the differences, and explain the advantages of each.
  - Explain the three basic areas of a residential structure.
  - Identify important factors in the planning of sleeping areas.
  - Analyze the needs of the living area and apply design principles to meet these needs.
  - Design a functional service area to meet a family’s needs.
- Plan a project using site and building restrictions imposed by various entities (e.g., Planning, Zoning, Building, and Home
### III. Architecture Core (Continued)

**E. Architectural Drawings**
1. Plot plan
2. Foundation plan
3. Floor plan
4. Electrical plan
5. Plumbing plan
6. Perspective drawing

#### Owners Association)

**PS A8.6**
- Discuss key site considerations, restrictions, zoning, and codes.

- Understand the integration of architectural factors, such as soil mechanics, foundation design, engineering materials, and structure design. **PS A7.1**
- Construct projects and products specific to the Engineering and Architecture sector requirements and expectations. **AS 10.3**
  - Locate a building on a site and draw a plot plan using correct symbols and conventions.
  - Design and draw a foundation plan
  - Design and draw a typical floor plan and elevations.
  - Sketch selected roof designs.
  - Draw typical electric and plumbing plans.
  - Make a one or two-point perspective drawing.

### F. Local Building Codes and Compliance regulations

- Access, analyze, and implement quality assurance standards of practice. **AS 8.1**
- Identify local, district, state, and federal regulatory agencies, entities, laws, and regulations related to the Engineering and Architecture industry sector. **AS 8.2**
  - Type “5” handout for City of Los Angeles.
  - Address Title 24 compliance/understanding structural engineer.
### IV. CAD Drafting – Machine

#### A. Orientation to CAD
1. Applications
2. Safety

- Understand the use of computer-aided drafting (CAD) in developing architectural designs. *PS A4.0*
- Interpret and explain terminology and practices specific to the Engineering and Architecture sector. *AS 10.1*
  - Explain the applications of CAD system.
  - Describe the duties of technicians in relation to drafting and design.
- Use health and safety practices for storing, cleaning, and maintaining tools, equipment, and supplies. *AS 6.3*
  - Show safety and care in the use of CAD hardware and software.

#### B. CAD Fundamentals
1. Hardware
2. Software
3. User manuals
4. Primitive entities
5. Image control
6. Operating modes
7. Coordinate systems
8. Technical reading and math
9. Applied geometry
10. Problem solving
11. Outputting-plotting
12. Dimensioning
13. Designing

- Develop a preliminary architectural proposal using CAD software. *PS A4.1*
  - Demonstrate features and functionality of CAD hardware and software.
- Construct projects and products specific to the Engineering and Architecture sector requirements and expectations. *AS 10.3*
  - Read and interpret operating and users manuals.
  - Use entities such as lines, arcs alphabetic-numeric’s to create drawings.
  - Demonstrate how to use coordinated and note-making systems.
  - Use zoom, scroll, pan, repaint, save image, restore image, layers, levels, colors, highlight, and scale.
  - Use the principles of orthographic drawing, symbols, and conventions.
  - Show ability to do technical reading, applied geometry problem solving, and math concepts.
IV. CAD Drafting – Machine (Continued)

C. CAD Drawing
1. Detail drawing
2. 2D and 3D drawing
3. Dimensioning
4. ANSI SAE standards
5. Cartesian coordinates
6. Polar coordinates
7. Machine drawing
8. 3D database
9. Auxiliary view

D. Electronic Drawing
1. Schematic drawings
2. PCB drawings
3. Printed circuits
4. Printed circuit boards

- Demonstrate the use of file translators, printing file archiving, back up, database manipulating.
- Use plotting equipment.
- Demonstrate the use of various computer-oriented devices and programs to load data into computer for database creation and manipulation.

- Produce proportional two- and three-dimensional sketches and designs. PS A3.2
- Use 2D and 3D drawing modes to create orthographic and detail drawings.

- Construct projects and products specific to the Engineering and Architecture sector requirements and expectations. AS 10.3
- Use proper dimensioning techniques of machine drawings using ANSI SAE and other standards.
- Use Cartesian and polar coordinate systems to create a CAD drawing database.
- Create a machine drawing that is properly dimensioned and annotated.
- Create a 3D database of machine parts so that any auxiliary view and perspective view may be presented.

- Apply high quality techniques to product or presentation design and development. AS 7.5
- Construct projects and products specific to the Engineering and Architecture sector requirements and expectations. AS 10.3
- Prepare electronic symbols for libraries to be used in schematic and PCB drawings.
- Prepare schematic drawing and net lists using schematic capture techniques.
- Prepare a PCB with routes and a bill of material with part

| IV. CAD Drafting – Machine (Continued) | attributes.  
  o Conduct research in electronic parts catalogues, reading, writing, typing, listening, note taking, and problem solving.  
  o Prepare the artwork for a PCB using net lists and Auto Routing and/or Manual Routing.  
  o Demonstrate ability to download drawings, symbols, or blocks from the internet. |
## V. CAD Drafting – Architecture

### A. Orientation to CAD
1. Applications
2. Importance
3. History
4. Safety
5. Geometry

- Understand the use of computer-aided drafting (CAD) in developing architectural designs. *PS A4.1*
  - Explain the applications of CAD system in architecture.
  - Discuss the importance of CAD in architecture.
  - Compare and contrast CAD and traditional drafting.
- Know significant historical architectural projects and their effects on society. *PS A1.1*
  - Review the history of CAD drafting.
- Use health and safety practices for storing, cleaning, and maintaining tools, equipment, and supplies. *AS 6.3*
  - Show safety and care in the use of CAD hardware and software.
- Use the concepts of geometric construction in the development of design drawings. *PS C5.4*
  - Identify and sketch the basic geometric shapes used in architecture.

### B. CAD Fundamentals
1. Hardware and software
2. User manuals
3. Terminology
4. Graphic output
5. Characteristics
6. CAD commands
7. Line commands
8. Dimensioning commands

- Understand the use of computer-aided drafting (CAD) in developing architectural designs. *PS A4.1*
  - Demonstrate and use CAD hardware and software.
- Interpret and explain terminology and practices specific to the Engineering and Architecture sector. *AS 10.1*
  - Read and interpret operating and users manuals.
  - Define computer application terms used in architecture.
  - Identify hardware components used in CAD systems.
  - Discuss various graphic output devices used.
  - Describe the characteristics of basic CAD software.
  - Demonstrate an understanding of the different commands

13. Drawing details
14. Wall sections

### STUDENT OUTCOMES

- **used in CAD.**
  - Explain the line and dimensioning commands.

- **Interpret and explain terminology and practices specific to the Engineering and Architecture sector. AS 10.1**
  - Explain the benefits of using CAD in generating architectural design.

- **Construct projects and products specific to the Engineering and Architecture sector requirements and expectations. AS 10.3**
  - Demonstrate the use of several layers when making a CAD drawing.
  - Demonstrate the essential steps in drawing floor plans.
  - Prepare a space diagram for a residential structure to determine how the various areas will fit together.
  - Design a residential structure and draw a floor plan.
  - Use the symbols library to in adding cabinets, appliances, and fixtures to a floor plan.
  - Use the TEXT command to enter room names and sizes, scale, notes, and title to a floor plan.
  - Draw and accurate typical wall section to provide the measurements needed to draw an elevations plan.
  - Project features to be drawn on the elevation from the floor plan.
  - Complete an elevation drawing.
  - Call up a copy of the floor plan to use as an underlay, and

Engineering and Architecture

Sector Description

This sector is designed to provide a foundation in engineering, architecture, and design for students in California. Students are engaged in an instructional program that integrates academic and technical preparation and focuses on career awareness, career exploration, and career preparation in four pathways that emphasize real-world, occupationally relevant experiences of significant scope and depth: Architectural Design; Engineering Technology; Engineering Design; and Environmental Engineering. To prepare students for continued training, advanced educational opportunities, and direct entry to a career, the Engineering and Architecture programs offer the following components: classroom, laboratory, and hands-on contextual learning; project- and work-based instruction; and leadership and interpersonal skills development.
1.0 Academics
Analyze and apply appropriate academic standards required for successful industry sector pathway completion leading to postsecondary education and employment. Refer to the Engineering and Architecture academic alignment matrix for identification of standards.

2.0 Communications
Acquire and accurately use Engineering and Architecture sector terminology and protocols at the career and college readiness level for communicating effectively in oral, written, and multimedia formats. (Direct alignment with LS 9-10, 11-12.6)

2.1 Recognize the elements of communication using a sender–receiver model.
2.2 Identify barriers to accurate and appropriate communication.
2.3 Interpret verbal and nonverbal communications and respond appropriately.
2.4 Demonstrate elements of written and electronic communication, such as accurate spelling, grammar, and format.
2.5 Communicate information and ideas effectively to multiple audiences using a variety of media and formats.
2.6 Advocate and practice safe, legal, and responsible use of digital media information and communications technologies.

3.0 Career Planning and Management
Integrate multiple sources of career information from diverse formats to make informed career decisions, solve problems, and manage personal career plans. (Direct alignment with SLS 11-12.2)

3.1 Identify personal interests, aptitudes, information, and skills necessary for informed career decision making.
3.2 Evaluate personal character traits, such as trust, respect, and responsibility, and understand the impact they can have on career success.
3.3 Explore how information and communication technologies are used in career planning and decision making.
3.4 Research the scope of career opportunities available and the requirements for education, training, certification, and licensure.
3.5 Integrate changing employment trends, societal needs, and economic conditions into career planning.
3.6 Recognize the role and function of professional organizations, industry associations, and organized labor in a productive society.
3.7 Recognize the importance of small business in the California and global economies.
3.8 Understand how digital media are used by potential employers and postsecondary agencies to evaluate candidates.

3.9 Develop a career plan that reflects career interests, pathways, and postsecondary options.

4.0 Technology
Use existing and emerging technology to investigate, research, and produce products and services, including new information, as required in the Engineering and Architecture sector workplace environment. (Direct alignment with WS 11-12.6)

4.1 Use electronic reference materials to gather information and produce products and services.

4.2 Employ Web-based communications responsibly and effectively to explore complex systems and issues.

4.3 Use information and communication technologies to synthesize, summarize, compare, and contrast information from multiple sources.

4.4 Discern the quality and value of information collected using digital technologies, and recognize bias and intent of the associated sources.

4.5 Research past, present, and projected technological advances as they impact a particular pathway.

4.6 Assess the value of various information and communication technologies to interact with constituent populations as part of a search of the current literature or in relation to the information task.

5.0 Problem Solving and Critical Thinking
Conduct short, as well as more sustained, research projects to create alternative solutions to answer a question or solve a problem unique to the Engineering and Architecture sector using critical and creative thinking; logical reasoning, analysis, inquiry, and problem-solving techniques. (Direct alignment with WS 11-12.7)

5.1 Identify and ask significant questions that clarify various points of view to solve problems.

5.2 Solve predictable and unpredictable work-related problems using various types of reasoning (inductive, deductive) as appropriate.

5.3 Use systems thinking to analyze how various components interact with each other to produce outcomes in a complex work environment.

5.4 Interpret information and draw conclusions, based on the best analysis, to make informed decisions.

6.0 Health and Safety
Demonstrate health and safety procedures, regulations, and personal health practices and determine the meaning of symbols, key terms, and domain-specific words and phrases as related to the Engineering and Architecture sector workplace environment. (Direct alignment with RSTS 9-10, 11-12.4)
6.1 Locate, and adhere to, Material Safety Data Sheet (MSDS) instructions.
6.2 Interpret policies, procedures, and regulations for the workplace environment, including employer and employee responsibilities.
6.3 Use health and safety practices for storing, cleaning, and maintaining tools, equipment, and supplies.
6.4 Practice personal safety when lifting, bending, or moving equipment and supplies.
6.5 Demonstrate how to prevent and respond to work-related accidents or injuries; this includes demonstrating an understanding of ergonomics.
6.6 Maintain a safe and healthful working environment.
6.7 Be informed of laws/acts pertaining to the Occupational Safety and Health Administration (OSHA).

7.0 Responsibility and Flexibility
Initiate, and participate in, a range of collaborations demonstrating behaviors that reflect personal and professional responsibility, flexibility, and respect in the Engineering and Architecture sector workplace environment and community settings. (Direct alignment with SLS 9-10, 11-12.1)

7.1 Recognize how financial management impacts the economy, workforce, and community.
7.2 Explain the importance of accountability and responsibility in fulfilling personal, community, and workplace roles.
7.3 Understand the need to adapt to changing and varied roles and responsibilities.
7.4 Practice time management and efficiency to fulfill responsibilities.
7.5 Apply high-quality techniques to product or presentation design and development.
7.6 Demonstrate knowledge and practice of responsible financial management.
7.7 Demonstrate the qualities and behaviors that constitute a positive and professional work demeanor, including appropriate attire for the profession.
7.8 Explore issues of global significance and document the impact on the Engineering and Architecture sector.

8.0 Ethics and Legal Responsibilities
Practice professional, ethical, and legal behavior, responding thoughtfully to diverse perspectives and resolving contradictions when possible, consistent with applicable laws, regulations, and organizational norms. (Direct alignment with SLS 11-12.1d)

8.1 Access, analyze, and implement quality assurance standards of practice.
8.2 Identify local, district, state, and federal regulatory agencies, entities, laws, and regulations related to the Engineering and Architecture industry sector.
8.3 Demonstrate ethical and legal practices consistent with Engineering and Architecture sector workplace standards.
8.4 Explain the importance of personal integrity, confidentiality, and ethical behavior in the workplace.

8.5 Analyze organizational culture and practices within the workplace environment.

8.6 Adhere to copyright and intellectual property laws and regulations, and use and appropriately cite proprietary information.

8.7 Conform to rules and regulations regarding sharing of confidential information, as determined by Engineering and Architecture sector laws and practices.

9.0 Leadership and Teamwork
Work with peers to promote divergent and creative perspectives, effective leadership, group dynamics, team and individual decision making, benefits of workforce diversity, and conflict resolution as practiced in the SkillsUSA career technical student organization. (Direct alignment with SLS 11-12.1b)

9.1 Define leadership and identify the responsibilities, competencies, and behaviors of successful leaders.

9.2 Identify the characteristics of successful teams, including leadership, cooperation, collaboration, and effective decision-making skills, as applied in groups, teams, and career technical student organization activities.

9.3 Understand the characteristics and benefits of teamwork, leadership, and citizenship in the school, community, and workplace setting.

9.4 Explain how professional associations and organizations and associated leadership development and competitive career development activities enhance academic preparation, promote career choices, and contribute to employment opportunities.

9.5 Understand that the modern world is an international community and requires an expanded global view.

9.6 Respect individual and cultural differences and recognize the importance of diversity in the workplace.

9.7 Participate in interactive teamwork to solve real Engineering and Architecture sector issues and problems.

10.0 Technical Knowledge and Skills
Apply essential technical knowledge and skills common to all pathways in the Engineering and Architecture sector, following procedures when carrying out experiments or performing technical tasks. (Direct alignment with WS 11-12.6)

10.1 Interpret and explain terminology and practices specific to the Engineering and Architecture sector.

10.2 Comply with the rules, regulations, and expectations of all aspects of the Engineering and Architecture sector.
10.3 Construct projects and products specific to the Engineering and Architecture sector requirements and expectations.

10.4 Collaborate with industry experts for specific technical knowledge and skills.

**11.0 Demonstration and Application**

Demonstrate and apply the knowledge and skills contained in the Engineering and Architecture anchor standards, pathway standards, and performance indicators in classroom, laboratory and workplace settings, and through the SkillsUSA career technical student organization.

11.1 Utilize work-based/workplace learning experiences to demonstrate and expand upon knowledge and skills gained during classroom instruction and laboratory practices specific to the Engineering and Architecture sector program of study.

11.2 Demonstrate proficiency in a career technical pathway that leads to certification, licensure, and/or continued learning at the postsecondary level.

11.3 Demonstrate entrepreneurship skills and knowledge of self-employment options and innovative ventures.

11.4 Employ entrepreneurial practices and behaviors appropriate to Engineering and Architecture sector opportunities.

11.5 Create a portfolio, or similar collection of work, that offers evidence through assessment and evaluation of skills and knowledge competency as contained in the anchor standards, pathway standards, and performance indicators.
A. Architectural Design Pathway

The Architectural Design pathway provides learning opportunities for students interested in preparing for careers in such areas as architecture, industrial design, and civil engineering.

Sample occupations associated with this pathway:
- Drafter
- Architect
- Structural Designer
- Building Department Plan Examiner
- City Planner

A1.0 Understand how history shaped architecture and know significant events in the history of architectural design.
   A1.1 Know significant historical architectural projects and their effects on society.
   A1.2 Understand the development of architectural systems in relation to aesthetics, efficiency, and safety.

A2.0 Compare the theoretical, practical, and contextual issues that influence design.
   A2.1 Describe the influence of community context and zoning requirements on architectural design.
   A2.2 Understand the ways in which sociocultural conditions and issues influence architectural design.
   A2.3 Compare the theoretical and practical effects of human and physical factors on the development of architectural designs.
   A2.4 Analyze project design and compile a cost analysis.

A3.0 Understand the sketching processes used in concept development.
   A3.1 Apply sketching techniques to a variety of architectural models.
   A3.2 Produce proportional two- and three-dimensional sketches and designs.
   A3.3 Present conceptual ideas, analysis, and design concepts using freehand graphic communication techniques.

A4.0 Understand the use of computer-aided drafting (CAD) in developing architectural designs.
   A4.1 Develop a preliminary architectural proposal using CAD software.
   A4.2 Analyze viability of a project as the design is developed using Building Information Modeling (BIM).
A5.0 Compare the relationship between architecture and the external environment.
A5.1 Understand the significance of sustainable building design practices that incorporate beneficial energy and environmental design policies.
A5.2 Develop a site analysis that considers passive energy techniques, sustainability issues, and landscaping.
A5.3 Create a building design that incorporates passive and/or active energy-efficient technologies.

A6.0 Understand methods used to analyze simple structures.
A6.1 Understand load transfer mechanisms.
A6.2 Understand stress-strain relationships of building structures.
A6.3 Interpret structural design considerations, including load-bearing relationships of shear walls, columns, and beams.
A6.4 Design a simple structure by using structural analysis principles.

A7.0 Understand the properties of structural materials.
A7.1 Understand the integration of architectural factors, such as soil mechanics, foundation design, engineering materials, and structure design.
A7.2 Develop a stress analysis chart of typical structural components.
A7.3 Evaluate available building materials (e.g., steel, concrete, and wood) by considering their properties and their effect on building form.
A7.4 Develop a preliminary building plan using the appropriate materials.

A8.0 Systematically complete an architectural project.
A8.1 Describe the various components of structures, including lighting; heating, ventilating, and air-conditioning (HVAC); mechanical; electrical; plumbing; communication; security; and vertical transportation systems.
A8.2 Develop a preliminary proposal for presentation of an architectural design.
A8.3 Read and interpret architectural and construction plans, drawings, diagrams, and specifications.
A8.4 Develop a complete set of architectural plans and drawings.
A8.5 Estimate the materials needed for a project by reading an architectural drawing.
A8.6 Plan a project using site and building restrictions imposed by various entities (e.g., Planning, Zoning, Building, and Home Owners Association [HOA]).
A8.7 Plan the sequence of events leading to an architectural project.

A9.0 Using various methods create both written and digital portfolios to represent architectural renderings.
A9.1 Develop a binder or digital portfolio representative of completed work for presentation.
A9.2 Prepare an effective oral presentation of the portfolio content.
B. Engineering Technology Pathway

The Engineering Technology pathway provides learning opportunities for students interested in preparing for careers in the design, production, or maintenance of mechanical, electrical, electronics, or electromechanical products and systems.

Sample occupations associated with this pathway:

- Surveyor
- Research and Development Analyst
- Engineering Technologist
- Field Engineer
- Operations Engineer

B1.0 Communicate and interpret information clearly in industry-standard visual and written formats.

B1.1 Explain the classification and use of various components, symbols, abbreviations, and media common to technical drawings.

B1.2 Describe the current industry standards for illustration and layout.

B1.3 Draw flat layouts of a variety of objects by using the correct drafting tools, techniques, and media.

B1.4 Organize and complete an assembly drawing using information collected from detailed drawings.

B1.5 Create reports and data sheets for writing specifications.

B2.0 Demonstrate the sketching process used in concept development.

B2.1 Understand the process of producing proportional two- and three-dimensional sketches and designs.

B2.2 Apply sketching techniques to a variety of architectural and engineering models.

B2.3 Present conceptual ideas, analysis, and design concepts using freehand graphic communication techniques.

B3.0 Identify the fundamentals of the theory, measurement, control, and applications of electrical energy, including alternating and direct currents.

B3.1 Understand the characteristics of alternating current (AC) and how it is generated; the characteristics of the sine wave; and of AC, tuned, and resonant circuits; and the nature of the frequency spectrum.

B3.2 Analyze relationships between voltage, current, resistance, and power related to direct current (DC) circuits.

B3.3 Calculate, construct, measure, and interpret both AC and DC circuits.

B3.4 Understand how electrical control and protection devices are used in electrical systems.
B3.5 Calculate loads, currents, and circuit-operating parameters.
B3.6 Classify and use various electrical components, symbols, abbreviations, media, and standards of electrical drawings.
B3.7 Analyze, repair, or measure electrical and electronic systems, circuits, or components using appropriate electronic instruments.
B3.8 Predict the effects of circuit conditions on the basis of measurements and calculations of voltage, current, resistance, and power.

B4.0 Understand the concepts of physics that are fundamental to engineering technology.
B4.1 Describe Newton's laws and how they affect and define the movement of objects.
B4.2 Explain how the laws of conservation of energy and momentum provide a way to predict and describe the movement of objects.
B4.3 Compare the effects and applications of heat transfer and thermal dynamic processes.
B4.4 Explore the fundamentals and properties of waveforms and how waveforms may be used to carry energy.
B4.5 Analyze how electric and magnetic phenomena are related and know common practical applications.

B5.0 Understand how the principles of force, work, rate, power, energy, and resistance relate to mechanical, electrical, fluid, and thermal engineering systems.
B5.1 Differentiate between scalars and vectors.
B5.2 Solve problems by using the concept of vectoring to predict resultants.
B5.3 Compare and explore the six simple machines and their applications.
B5.4 Evaluate how energy is transferred and predict the effects of resistance in mechanical, electrical, fluid, and thermal systems.
B5.5 Formulate and solve problems by using the appropriate units applied in mechanical, electrical, fluid, and thermal engineering systems.

B6.0 Employ the design process to solve analysis and design problems.
B6.1 Understand the steps in the design process.
B6.2 Determine what information and principles are relevant to a problem and its analysis.
B6.3 Choose between alternate solutions in solving a problem and be able to justify the choices made in determining a solution.
B6.4 Translate word problems into mathematical statements when appropriate.
B6.5 Demonstrate the process of developing multiple details, within design constraints, into a single solution.
B6.6 Construct a prototype from plans and test it.
B6.7 Evaluate and redesign a prototype on the basis of collected test data.
B7.0 Understand industrial engineering processes, including the use of tools and equipment, methods of measurement, and quality assurance.

B7.1 Know the structure and processes of a quality assurance cycle.

B7.2 Describe the major manufacturing processes.

B7.3 Use tools, fasteners, and joining systems employed in selected engineering processes.

B7.4 Estimate and measure the size of objects in both Standard International and United States units.

B7.5 Apply appropriate geometric dimensioning and tolerancing (GD&T) practices.

B7.6 Calibrate precision measurement tools and instruments to measure objects.

B8.0 Understand fundamental control system design and develop systems that complete preprogrammed tasks.

B8.1 Identify the elements and processes necessary to develop a controlled system that performs a task.

B8.2 Demonstrate the use of sensors for data collection and process correction in controlled systems.

B8.3 Perform tests, collect data, analyze relationships, and display data in a simulated or modeled system using appropriate tools and technology.

B8.4 Program a computing device to control systems or processes.

B8.5 Use motors, solenoids, and similar devices as output mechanisms in controlled systems.

B8.6 Assemble input, processing, and output devices to create controlled systems capable of accurately completing a preprogrammed task.

B9.0 Understand the fundamentals of systems and market influences on products as they are developed and released to production.

B9.1 Understand the process of product development.

B9.2 Understand decision matrices and the use of graphic tools in illustrating the development of a product and the processes involved.

B10.0 Design and construct a culminating project effectively using engineering technology.

B10.1 Use methods and techniques for employing all engineering technology equipment appropriately.

B10.2 Apply conventional engineering technology processes and procedures accurately, appropriately, and safely.

B10.3 Apply the concepts of engineering technology to the tools, equipment, projects, and procedures of the Engineering Technology Pathway.

B11.0 Understand the methods of creating both written and digital portfolios.

B11.1 Develop a binder or digital portfolio representative of student work for presentation.

B11.2 Give an effective oral presentation of a portfolio.
C. Engineering Design Pathway

The Engineering Design pathway provides learning opportunities for students interested in preparing for careers in the design and production of visual communications.

Sample occupations associated with this pathway:
- Mechanical/Electrical Drafter
- Design Engineer
- Manufacturing Design Engineer
- Project Architect

C1.0 Understand historical and current events related to engineering design and their effects on society.
  C1.1 Know historical and current events that have relevance to engineering design.
  C1.2 Interpret the development of graphic language in relation to engineering design.

C2.0 Understand the effective use of engineering design equipment.
  C2.1 Employ engineering design equipment using the appropriate methods and techniques.
  C2.2 Apply conventional engineering design equipment procedures accurately, appropriately, and safely.
  C2.3 Apply the concepts of engineering design to the tools, equipment, projects, and procedures of the Engineering Design Pathway.

C3.0 Understand the sketching process used in concept development.
  C3.1 Apply sketching techniques to a variety of architectural models.
  C3.2 Produce proportional two- and three-dimensional sketches and designs.
  C3.3 Present conceptual ideas, analysis, and design concepts using freehand, graphic, communication techniques.

C4.0 Understand measurement systems as they apply to engineering design.
  C4.1 Know how the various measurement systems are used in engineering drawings.
  C4.2 Understand the degree of accuracy necessary for engineering design.

C5.0 Use proper projection techniques to develop orthographic drawings.
  C5.1 Understand the concepts and procedures necessary for producing drawings.
  C5.2 Develop multiview drawings using the orthographic projection process.
  C5.3 Understand the various techniques for viewing objects.
  C5.4 Use the concepts of geometric construction in the development of design drawings.
  C5.5 Apply pictorial drawings derived from orthographic multiview drawings and sketches.
C6.0 Understand the applications and functions of sectional views.
   C6.1 Understand the function of sectional views.
   C6.2 Clarify hidden features of an object using a sectional view and appropriate cutting planes.

C7.0 Understand the applications and functions of auxiliary views.
   C7.1 Understand the function of auxiliary views.
   C7.2 Use auxiliary views to clarify the true shape and size of an object.

C8.0 Understand and apply proper dimensioning standards to drawings.
   C8.1 Know a variety of drafting applications and understand the proper dimensioning standards for each.
   C8.2 Apply dimension to various objects and features.

C9.0 Understand the tolerance relationships between mating parts.
   C9.1 Understand what constitutes mating parts in engineering design.
   C9.2 Interpret geometric tolerancing symbols in a drawing.
   C9.3 Use tolerancing in an engineering drawing.

C10.0 Understand the methods of applying text to a drawing.
   C10.1 Describe the processes of lettering and/or text editing.
   C10.2 Implement standard methods of title block creation and use.
   C10.3 Develop drawings using notes and specifications.
   C10.4 Plan, prepare, and interpret drawings and models through traditional drafting or computer-aided design (CAD) techniques.

C11.0 Understand the methods of creating both written and digital portfolios.
   C11.1 Develop a binder or digital portfolio representative of completed work for presentation.
   C11.2 Give an effective oral presentation of a portfolio.
D. Environmental Engineering Pathway

The Environmental Engineering pathway includes design and development processes, equipment, and systems that are used to create, monitor, prevent, or correct environmental events and conditions.

Sample occupations associated with this pathway:
- Environmental Safety Technician
- Environmental Specialist
- Environmental Analyst
- Environmental Scientist
- Air Pollution Control Engineer

D1.0 Communicate and interpret information clearly in industry-standard visual and written formats.
  D1.1 Know the current industry standards for illustration and layout.
  D1.2 Understand the classification and use of various electronic components, symbols, abbreviations, and media common to electronic drawings.
  D1.3 Organize and complete site plans.

D2.0 Understand the design process and how to solve analysis and design problems.
  D2.1 Understand the steps in the design process.
  D2.2 Determine what information and principles are relevant to a problem and its analysis.
  D2.3 Choose between alternate solutions in solving a problem and be able to justify choices in determining a solution.
  D2.4 Understand the process of developing multiple details into a single solution.
  D2.5 Translate word problems into mathematical statements when appropriate.
  D2.6 Build a prototype from plans and test it.
  D2.7 Evaluate and redesign a prototype on the basis of collected test data.

D3.0 Understand the fundamentals of earth science as they relate to environmental engineering.
  D3.1 Know the fundamental stages of geochemical cycles.
  D3.2 Understand the effects of pollution on hydrological features.
  D3.3 Classify the three major groups of rocks, according to their origin, on the basis of texture and mineral composition.
  D3.4 Analyze the importance and use of soil and evaluate how soil may be preserved and conserved.
  D3.5 Assess and evaluate geological hazards.
D3.6 Interpret and evaluate topographical maps and images.

D3.7 Locate and evaluate soil or geological conditions or features using global positioning systems equipment and related technology.

D3.8 Analyze soil erosion and identify the causes.

D4.0 Understand the effects of the weather, the hydrosphere, and the atmosphere on the environment.

  D4.1 Know the common causes of atmospheric contamination.
  D4.2 Understand the effects of weather fronts on regional air pollution.
  D4.3 Understand the relationship between the health of the marine environment and climate control.
  D4.4 Understand the effects of human activity on the atmospheric environment.
  D4.5 Analyze and predict conditions of meteorological events.
  D4.6 Analyze the mechanisms for air mass movement.
  D4.7 Analyze atmospheric pressure and weather systems.

D5.0 Understand how the principles of force, work, rate, power, energy, and resistance relate to mechanical, electrical, fluid, and thermal engineering systems.

  D5.1 Know the six simple machines and their applications.
  D5.2 Know how energy is transferred and the effects of resistance in mechanical, electrical, fluid, and thermal systems.
  D5.3 Understand scalars and vectors.
  D5.4 Solve problems by using the concept of vectoring to predict the resultant forces.
  D5.5 Solve problems by using the appropriate units applied in mechanical, electrical, fluid, and thermal engineering systems.

D6.0 Evaluate regional interactive systems and elements that create harmful environmental effects.

  D6.1 Describe the sources of, and impacts attributable to, pollution and contamination.
  D6.2 Recognize the actions that cause resource depletion.
  D6.3 Define the causes of erosion and soil depletion.
  D6.4 Describe the attributes and proliferation of hardscape.
  D6.5 Identify the sources of, and impacts attributable to, habitat alteration.

D7.0 Understand the concepts of physics that are fundamental to engineering technology.

  D7.1 Understand Newton’s laws and how they affect and define the movement of objects.
  D7.2 Understand how the laws of conservation of energy and momentum provide a way to predict and describe the movement of objects.
D7.3 Understand how electric and magnetic phenomena are related and know common practical applications.

D7.4 Analyze the fundamentals and properties of waveforms and how waveforms may be used to carry energy.

D8.0 Understand the effective use of environmental and natural science equipment.

D8.1 Use appropriate methods and techniques for employing environmental and natural science equipment.

D8.2 Apply conventional environmental and natural science processes and procedures accurately, appropriately, and safely.

D8.3 Apply the concepts of environmental and natural science to the tools, equipment, projects, and procedures of the Environmental Engineering Pathway.

D9.0 Identify the role and impact of waste management systems, and their operations, on the environment.

D9.1 Understand the role of waste and storm water management systems, their operation, and their impact on the environment.

D9.2 Explore the causes and effects of pollution linked to wastewater treatment facilities.

D9.3 Identify wastewater treatment processes that lessen environmental impacts and improve water reuse.

D9.4 Explain the types and sources of hazardous waste and associated safety practices and legal requirements for handling and disposing of such waste.

D9.5 Design solid waste disposal processes that lessen environmental impacts and improve recycling.

D10.0 Understand the field of land use management and its potential for environmental impact.

D10.1 Describe the need for and role of habitat preservation.

D10.2 Describe the composition, role, and function of ecosystems, including trends affecting viability.

D10.3 Explain the laws and regulations pertaining to ecosystem preservation and use.

D10.4 Demonstrate the need for, and methods of, land use planning.

D10.5 Identify the aspects of land use planning and describe current trends.

D10.6 Summarize the relationship between land use planning and energy use and distribution.

D10.7 Explain the laws and regulations pertaining to land use planning.

D10.8 Develop strategies to maximize the effectiveness of land use planning.

D11.0 Research the role of air quality management and systems, their operations, and their impact on the environment.

D11.1 Understand the elements that create outdoor air quality.
D11.2 Summarize the causes of air pollutants and their chemical composition.
D11.3 Research air pollutants and their threat to human health.
D11.4 Understand U.S. and California laws and regulations related to air pollution control programs and health effects of air pollution.
D11.5 Describe the basic U.S. Environmental Protection Agency (EPA) and California Air Resources Board (ARB) roles and regulations.

D12.0 Implement processes to support energy efficiency.
D12.1 Understand the relationship between power and energy efficiency.
D12.2 Outline how domestic and industrial appliances and systems affect the environment, such as water units and heating and cooling systems.
D12.3 Compare costs of alternate/renewable energy sources, systems, and appliances and traditional energy sources, systems, and appliances.
D12.4 Conduct an energy audit.

D13.0 Research drinking-water sources, systems, treatment, and conservation.
D13.1 Understand water reuse: issues, strategies, technologies, and applications.
D13.2 Analyze strategies for improving energy efficiencies in water collection and distribution.
D13.3 Describe the role of environmental engineering and green energy in water systems.
D13.4 Understand the functions and operations of water storage, reservoirs, aqueducts, and dams.
D13.5 Identify and explain the applicable codes and regulations.

D14.0 Evaluate the impact and flow management of storm water, rivers, and groundwater.
D14.1 Understand the designs and tools used in water flow management.
D14.2 Describe watershed modeling.
D14.3 Understand the principles and applications of drainage engineering.
D14.4 Use the Hydrologic Engineering Centers River Analysis System (HEC-RAS).
D14.5 Analyze and interpret contaminated harbor and river sediment.
D14.6 Describe the concerns and strategies for catastrophic storm water events and management.

## MATHEMATICS

### Algebra – A-CED – Creating Equations

Create equations that describe numbers or relationships

1. Create equations and inequalities in one variable including ones with absolute value and use them to solve problems in and out of context, including equations arising from linear functions.
   1.1 Judge the validity of an argument according to whether the properties of real numbers, exponents, and logarithms have been applied correctly at each step. (CA Standard Algebra II – 11.2)
## Academic Alignment Matrix

</tr>
<tr>
<td>d. (+) Graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing end behavior.</td>
</tr>
<tr>
<td>e. Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude.</td>
</tr>
</tbody>
</table>
**Academic Alignment Matrix**

### ENGINEERING AND ARCHITECTURE

8. Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function.
   - a. Use the process of factoring and completing the square in a quadratic function to show zeros, extreme values, and symmetry of the graph, and interpret these in terms of a context.
   - b. Use the properties of exponents to interpret expressions for exponential functions. For example, identify percent rate of change in functions such as \( y = (1.02)^t \), \( y = (0.97)^t \), \( y = (1.01)^{12t} \), \( y = (1.2)^{10t} \), and classify them as representing exponential growth or decay.

**Functions – F-LE – Linear, Quadratic, and Exponential Models**

1. Distinguish between situations that can be modeled with linear functions and with exponential functions.
   - a. Prove that linear functions grow by equal differences over equal intervals, and that exponential functions grow by equal factors over equal intervals.
   - b. Recognize situations in which one quantity changes at a constant rate per unit interval relative to another.
   - c. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.

**Functions – F-TF – Trigonometric Functions**

*Extend the domain of trigonometric functions using the unit circle*

1. Understand radian measure of an angle as the length of the arc on the unit circle subtended by the angle.
   - 1.1 Understand the notion of angle and how to measure it, in both degrees and radians. Convert between degrees and radians. (CA Standard Trigonometry - 1.0)

2. Explain how the unit circle in the coordinate plane enables the extension of trigonometric functions to all real numbers, interpreted as radian measures of angles traversed counterclockwise around the unit circle.

<tr>
<td></td>
<td>2. (+) Find the components of a vector by subtracting the coordinates of an initial point from the coordinates of a terminal point.</td>
</tr>
<tr>
<td></td>
<td>3. (+) Solve problems involving velocity and other quantities that can be represented by vectors.</td>
</tr>
</tbody>
</table>
## Number and Quantity – N-VM – Vector and Matrix Quantities (continued)

### Perform operations on vectors

4. (+) Add and subtract vectors.
   a. Add vectors end-to-end, component-wise, and by the parallelogram rule. Understand that the magnitude of a sum of two vectors is typically not the sum of the magnitudes.
   b. Given two vectors in magnitude and direction form, determine the magnitude and direction of their sum.
   c. Understand vector subtraction \( \mathbf{v} - \mathbf{w} \) as \( \mathbf{v} + (-\mathbf{w}) \), where \(-\mathbf{w}\) is the additive inverse of \(\mathbf{w}\), with the same magnitude as \(\mathbf{w}\) and pointing in the opposite direction. Represent vector subtraction graphically by connecting the tips in the appropriate order, and perform vector subtraction component-wise.

5. (+) Multiply a vector by a scalar.
   a. Represent scalar multiplication graphically by scaling vectors and possibly reversing their direction; perform scalar multiplication component-wise, e.g., as \( c(\mathbf{v}_1, \mathbf{v}_2) = (cv_1, cv_2) \).
   b. Compute the magnitude of a scalar multiple \( cv \) using \( lcvll = lclvl \). Compute the direction of \( cv \) knowing that when \( lclvl \neq 0 \), the direction of \( cv \) is either along \( v \) (for \( c > 0 \)) or against \( v \) (for \( c < 0 \)).

### Perform operations on matrices and use matrices in applications

6. (+) Use matrices to represent and manipulate data, e.g., to represent payoffs or incidence relationships in a network.

7. (+) Multiply matrices by scalars to produce new matrices, e.g., as when all of the payoffs in a game are doubled.

8. (+) Add, subtract, and multiply matrices of appropriate dimensions.

9. (+) Understand that, unlike multiplication of numbers, matrix multiplication for square matrices is not a commutative operation, but still satisfies the associative and distributive properties.

10. (+) Understand that the zero and identity matrices play a role in matrix addition and multiplication similar to the role of 0 and 1 in the real numbers. The determinant of a square matrix is nonzero if and only if the matrix has a multiplicative inverse.

#### Statistics and Probability – S-ID – Interpreting Categorical and Quantitative Data

**Summarize, represent, and interpret data on a single count or measurement variable**

1. Represent data with plots on the real number line (dot plots, histograms, and box plots). |
| A2.0 | B1.0, B8.0, B10.0 |

2. Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets. |
| A2.0 | B1.0, B10.0 |

3. Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers). |
| A2.0 | B1.0, B10.0 |

4. Use the mean and standard deviation of a data set to fit it to a normal distribution and to estimate population percentages. Recognize that there are data sets for which such a procedure is not appropriate. Use calculators, spreadsheets, and tables to estimate areas under the normal curve. |
| A2.0 | B1.0, B10.0 |

**Summarize, represent, and interpret data on two categorical and quantitative variables**

5. Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data. |
| B1.0, B8.0, B10.0 |

6. Represent data on two quantitative variables on a scatter plot, and describe how the variables are related. |
   a. Fit a function to the data; use functions fitted to data to solve problems in the context of the data. Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models. |
   b. Informally assess the fit of a function by plotting and analyzing residuals. |
   c. Fit a linear function for a scatter plot that suggests a linear association. |
| B1.0, B10.0 |
### Statistics and Probability – APPS – Advanced Placement Probability and Statistics

| 1.0 Students solve probability problems with finite sample spaces by using the rules for addition, multiplication, and complementation for probability distributions and understand the simplifications that arise with independent events. | B5.0 | D5.0 |
| 2.0 Students know the definition of conditional probability and use it to solve for probabilities in finite sample spaces. | B5.0 | D5.0 |
| 3.0 Students demonstrate an understanding of the notion of discrete random variables by using this concept to solve for the probabilities of outcomes, such as the probability of the occurrence of five or fewer heads in 14 coin tosses. | B5.0 | D5.0 |
| 4.0 Students understand the notion of a continuous random variable and can interpret the probability of an outcome as the area of a region under the graph of the probability density function associated with the random variable. | B5.0 | D5.0 |
| 5.0 Students know the definition of the mean of a discrete random variable and can determine the mean for a particular discrete random variable. | B5.0 | D5.0 |
| 6.0 Students know the definition of the variance of a discrete random variable and can determine the variance for a particular discrete random variable. | B5.0 | D5.0 |
| 7.0 Students demonstrate an understanding of the standard distributions (normal, binomial, and exponential) and can use the distributions to solve for events in problems in which the distribution belongs to those families. | B5.0 | D5.0 |
| 8.0 Students determine the mean and the standard deviation of a normally distributed random variable. | B5.0 | D5.0 |
| 9.0 Students know the central limit theorem and can use it to obtain approximations for probabilities in problems of finite sample spaces in which the probabilities are distributed binomially. | B5.0 | D5.0 |
| 10.0 Students know the definitions of the mean, median and mode of distribution of data and can compute each of them in particular situations. | B5.0 | D5.0 |
| 11.0 Students compute the variance and the standard deviation of a distribution of data. | B5.0 | D5.0 |
| 12.0 Students find the line of best fit to a given distribution of data by using least squares regression. | B5.0 | D5.0 |
| 13.0 Students know what the correlation coefficient of two variables means and are familiar with the coefficient’s properties. | B5.0 | D5.0 |

### Historical Research, Evidence, and Point of View – HR

4. Students construct and test hypotheses; collect, evaluate, and employ information from multiple primary and secondary sources; and apply it in oral and written presentations.

### Historical Interpretation – HI

1. Students show the connections, causal and otherwise, between particular historical events and larger social, economic, and political trends and developments.

3. Students interpret past events and issues within the context in which an event unfolded rather than solely in terms of present-day norms and values.
Appendix: CTE Model Curriculum Standards Contributors

Engineering and Architecture

Lloyd McCabe, Administrator, California Department of Education
John Dunn, Education Consultant, California Department of Education

Standards Review Team

Mark Martin, Director, Laney College
Arnold Ruskin, Instructor, San Diego Union High School District
Barbara Worden, Instructor, Liberty Union High School District

Standards Writing Team

Chris Alburn, Instructor, Elk Grove Unified School District
Debra Crane, Instructor, Galt Joint Union High School District
Chris Schlesselman, Instructor, Sacramento City Unified School District
Barbara Worden, Instructor, Liberty Union High School District

Common Core Alignment Team

Curtis Earle, Instructor, Los Angeles Unified School District
Jeff Kamansky, Instructor, Oceanside Unified School District
Sheryl Roccoforte, Instructor, Oceanside Unified School District
Zach Ronnenberg, Instructor, Davis Joint Unified School District
Frank Zuidema, Instructor, Oceanside Unified School District
Computer Assisted Drafting and Design Proficiencies

(Please choose from the following proficiencies – not to exceed 35 lines)

1. Uses technical skills and academic knowledge.
2. Communicates effectively.
3. Researches, accesses and manages career-related resources.
4. Develops a career plan and life goals.
5. Accepts personal and responsible citizenship.

Demonstrates the following job skills:

6. Uses scales and standard drafting equipment.
7. Uses common symbols and abbreviations.
8. Measures accurately and applies appropriate lettering techniques on a variety of drawings.
9. Layouts and produces well proportioned and easily understood two and three-dimensional sketches.
10. Develops a dimension drawing using current standards of dimensioning and tolerancing.
11. Identifies and correctly uses the alphabet of lines.
12. Represents objects graphically using appropriate projection techniques.
13. Uses the six principle views to fully describe an object.
14. Demonstrates the process of projection to create orthographic drawings.
15. Incorporates section views and appropriate cutting planes to clarify hidden features or object.
16. Draws full sections and half sections using appropriate sectional line conventions and symbols.
17. Develops primary auxiliary views of an object.
18. Crosshatches auxiliary sections using proper crosshatch form.
19. Draws objects accurately in pictorial format.
20. Produces isometric, oblique, and perspective drawings.
21. Completes various types of working drawings using appropriate line work, symbology, etc.
22. Applies correct tolerance conventions to drawings.
23. Develops primary orthographic and auxiliary views.
24. Organizes and completes an assembly drawing using information collected from detail drawings.
25. Locates a building on a site and draws a plot plan using correct symbols and conventions.
27. Designs and draws a typical floor plan and elevations.
28. Sketches selected roof designs.
29. Draws a typical electric and plumbing plans.
30. Makes a one or two-pint perspective drawing.
31. Understands and uses CAD hardware and software.
32. Reads and interprets operating and users manuals.
33. Uses entities such as lines, arcs, and alpha-numerics to create drawings.
34. Demonstrates how to use coordinated and note-making systems.
35. Uses zoom, scroll, pan, repaint, save image, restore image, layers, levels, colors, highlight, and scale.
36. Uses the principles of orthographic drawing, symbols, and conventions.

Effective 2014-2015
37. Shows ability to do technical reading and applies geometry problem solving and math concepts.
38. Demonstrates the use of file translators, printing file archiving, back up, and database manipulating.
39. Uses 2D and 3D drawing modes to create orthographic and detail drawings.
40. Uses proper dimensioning techniques of machine drawings using ANSI SAE and other standards.
41. Uses Cartesian and polar coordinate systems to create a CAD drawing database.
42. Creates a machine drawing that is properly dimensioned and annotated.
43. Creates a 3D database of machine parts so auxiliary view and perspective view may be presented.
44. Prepares electronic symbols for libraries to be used in schematic and PCB drawings.
45. Prepares schematic drawings and net lists using schematic capture techniques.
46. Prepares a PCB with routes and a bill of material with part attributes.
47. Conducts research in electronic parts catalogues, reading, writing, typing, listening, note taking, etc.
48. Prepares the artwork for a PCB using netlists and/Auto Routing and/or Manual Routing.
49. Explains the benefits of using CAD in generating architectural design.
50. Demonstrates the use of CAD commands and functions.
51. Demonstrates the basic steps in producing CAD floor plans, elevations, foundations plans, plot plans, electrical plans, and details.
52. Assigns layers, colors, and pens in the design of a residential structure.
53. Demonstrates the use of several layers when making a CAD drawing.
54. Demonstrates the essential steps in drawing floor plans.
55. Prepares a space diagram for a residential structure.
56. Designs a residential structure and draws a floor plan.
57. Uses the symbols library to add cabinets, appliances, and fixtures to a floor plan.
58. Uses the TEXT command to enter room names and sizes, scale, notes, and title to a floor plan.
59. Draws an accurate typical wall section.
60. Projects features to be drawn on the elevation from the floor plan.
61. Completes an elevation drawing.
62. Calls up a copy of the floor plan to use as an underlay and draws a foundation plan.
63. Completes an electrical plan to show the locations and types of all electrical features in the home.
64. Draws a plot plan.
